

INTER-ROW MOWER

<http://tiny.cc/interrow>

FEATURES & BENEFITS

- Spring shock absorber system
- Abrasion resistant guard
- Floating system

The inter-row mower is designed to cut grass and shrubs around trees, guard rails, traffic signs, and other obstacles. The floating mower system allows the mower disk to automatically follow ground contours. This system provides excellent productivity and an even cut. The inter-row mower disk can be offset to the right to allow for variable working conditions. It is equipped with a hydraulic valve that prevents blades rotation inversion.

Note: the floating boom valve on the machine is suggested.
